Bruno Rocha

Software Engineer | .NET • Azure • Event-Driven & Real-Time Systems

São Paulo, Brazil • Open to remote roles (US/EU time zones) • bruno.rocha0011@gmail.com • +55 12 99609-9504 • LinkedIn: Bruno Rocha | LinkedIn

Summary

Software Engineer with 4+ years of experience building scalable .NET systems for high-demand environments, including platforms serving 22M+ customers. Specialized in event-driven and real-time architectures using RabbitMQ, Redis, SignalR, and Azure. Proven record of reducing latency and infrastructure load through caching and request aggregation, including up to 90% fewer downstream requests on critical endpoints. Full professional English proficiency.

Experience

Software Engineer – PerformaIT (client: Pague Menos)

Remote, Brazil | 07/2025 – Present

- Maintain and evolve high-availability backend systems for Pague Menos, one of Brazil's largest pharmacy retail chains, serving 22M+ active customers nationwide.
- Reduced downstream service requests by up to 90% on critical endpoints by implementing response caching and aggregation strategies, lowering infrastructure load and improving latency.
- Delivered corrective and evolutionary improvements across APIs and backend services, working closely with cross-functional teams throughout the system lifecycle.

Technologies: .NET, ASP.NET Core, Azure, RabbitMQ, SQL Server, PostgreSQL, Docker, Microservices, CI/CD

Software Engineer – Onset Tecnologia (client: Compnet)

São José dos Campos, Brazil (hybrid) | 04/2023 – 06/2025

- Designed scalable backend services for a public-safety C4ISR platform used for real-time operational monitoring.
- Built a multi-layer caching strategy (Redis + in-memory) for high-frequency data access, cutting load times on critical system screens by 40%–80% and reducing database load.

- Developed a real-time vehicle tracking service using SignalR, streaming patrol unit locations to the command center with sub-second updates and live operational visibility.
- Implemented route deviation detection with automated alerts, enabling dispatch teams to respond immediately to unexpected changes.
- Used RabbitMQ for asynchronous event processing, ensuring reliable message delivery and consistent behavior under peak operational load.

Technologies: .NET, ASP.NET Core, Azure, RabbitMQ, SQL Server, CosmosDB, Redis, SignalR, Docker, DDD, Clean Architecture, CI/CD

Software Engineer – Distrito

Remote, Brazil | 02/2022 – 09/2022

- Built RESTful services with ASP.NET Core and SQL Server following Clean Architecture principles, with a focus on performance.
- Improved platform scalability and reliability through backend refactoring and query optimization.
- Applied test-driven development, with standardized validation, error handling, and automated tests to ensure API consistency.

Technologies: .NET Core, AWS, Kafka, SQL Server, Docker

Technical Skills

- **Languages & Frameworks:** C#, .NET, ASP.NET Core, JavaScript
- **Architecture & Practices:** Microservices, Event-Driven Architecture, Clean Architecture, DDD, SOLID, TDD, High-Concurrency Design, Performance Optimization, Caching Strategies
- **Cloud & DevOps:** Microsoft Azure, AWS, Docker, CI/CD, Observability
- **Messaging & Real-Time:** RabbitMQ, Kafka, SignalR
- **Databases & Caching:** SQL Server, PostgreSQL, Cosmos DB, Redis

Education

Software Development Program – Mesttra, Brazil (2021)

Languages

English: Full professional proficiency • Portuguese: Native
